# Rakesh Bhakre

+91 7378869973 | rakeshbhakre00@gmail.com | Portfolio | LinkedIn | GitHub

## Professional Summary

Software Engineer with industry and freelance development experience and strong foundations in Java, Data Structures and Algorithms, and full-stack development. Experienced in building web applications, developing REST APIs, debugging software, and translating project requirements into maintainable software solutions. Demonstrated problem-solving and teamwork through real-world projects and hackathon achievements.

## Experience

**Software Developer Intern** Jan 2025 – June 2025
*Quibits* *Navi Mumbai, Maharashtra*

- Developed and enhanced multiple client-facing web applications for international clients, delivering functional features aligned with project requirements and production needs.
- Built responsive, reusable frontend components using React.js, JavaScript, HTML5, and CSS3, improving UI consistency and user experience across web applications.
- Implemented backend functionality using Java and Spring Boot, integrating RESTful APIs to connect frontend workflows with application services and data.
- Debugged complex application issues, refined existing code, and collaborated through Git-based workflows to deliver maintainable, reliable software across client projects.

**Freelance Event Coordinator and Planner** Dec 2023 – May 2025
*Grandeur Events* *Mumbai, Maharashtra*

- Coordinated 100+ events for Amazon, Microsoft, and other clients, managing logistics, vendors, and on-ground execution.
- Led 5–30 volunteers, overseeing stakeholder communication, resource allocation, and problem-solving for seamless delivery.

## Projects

**GARUDX – Application Security Platform** | *Confidential Freelance Project* June 2026 – Sept 2026

- Engineered a full-stack application security platform automating source-code vulnerability analysis, dependency risk assessment, and hardcoded-secret detection using specialized security analysis tools.
- Developed Node.js/Express APIs for asynchronous scan orchestration, progress tracking, structured findings storage in MongoDB, and consolidated security report generation.
- Implemented a unified vulnerability management workflow with file locations, vulnerability descriptions, CWE/CVE identifiers where available, severity classifications, remediation guidance, and false-positive management.
- Built a React dashboard for scan history, vulnerability analytics, findings review, and severity-based prioritization, supporting the security assessment workflow from upload to reporting.

**Intelligent Traffic Surveillance System** | *College Major Project* Navi Mumbai, Maharashtra – 2025

- Built a real-time traffic surveillance system detecting 5 violations from CCTV/RTSP streams using YOLOv8 and DeepSORT.
- Achieved 3.2 km/h speed estimation error and 18–22 FPS using homography, HSV signal detection, and EasyOCR with FastAPI/SQLite; research paper published.

**RestoQR – Restaurant Ordering and Operations Platform** | *Live Project* Jan 2026 – Present

- Contributed to a real-world restaurant platform integrating QR ordering, kitchen operations, POS, billing, inventory, and administration into a unified workflow.
- Developed and improved end-to-end workflows across customer, kitchen, cashier, and management operations, reducing manual steps and improving operational efficiency.

## Education

**Bachelor of Computer Science and Engineering** 2026
*Indira Gandhi College of Engineering, Ghansoli (Autonomous Institute Affiliated to Mumbai University)*

## Achievements, Activities and Leadership

**Multiverse of Tech Hackathon** | *Winner, 2026*

- Won among ∼40 teams at Smt. Indira Gandhi College of Engineering by developing a MERN stack application for 3D model-based estimation of materials, cost, and construction timeline.

**Hackverse Spacetech Hackathon** | *1st Runner-Up, 2026*

- Built AEGIS, a Python-based spacecraft health monitor using Isolation Forest, NumPy autoencoders, and anomaly detection.
- Implemented explainable root-cause analysis, digital-twin fault simulation, and safety-validated mitigation recommendations.

## Technical Skills

**Programming Languages:** Java, Python, JavaScript, C++

**Frameworks & Libraries:** Spring Boot, React.js, Node.js, Express.js, NumPy, scikit-learn

**Backend & Software Development:** REST APIs, API Integration, Asynchronous Job Processing, Database Design

**AI/ML:** Neural Networks, Autoencoders, Isolation Forest, Anomaly Detection, Statistical Analysis, Root-Cause Analysis

**Databases & Developer Tools:** MongoDB, MySQL, Git, GitHub, Docker, Postman

**Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
